

Technology Stack

Date	25 June 2026
Team ID	-
Project Name	Credit Card Approval Prediction System
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details:

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose

1	Frontend / Client-Side	<i>HTML, CSS, JavaScript, Bootstrap</i>	<i>Responsive and user-friendly interface for applicants.</i>
2	Backend / Server-Side	<i>Python, Flask</i>	<i>Handles application processing and ML prediction requests.</i>
3	Database / Data Storage	<i>CSV Dataset, Joblib (.pkl)</i>	<i>Stores the training dataset and trained machine learning model for prediction.</i>
4	Cloud / Hosting / Deployment	<i>Render /local</i>	<i>Easy deployment and access for testing</i>
5	Version Control & CI/CD	<i>Git, GitHub</i>	<i>Tracks code changes and supports team collaboration.</i>
6	Third-Party APIs / Other Tools	<i>Scikit-learn, Pandas, NumPy, Joblib</i>	<i>Used for ML model training, data processing, and prediction.</i>
