

Coding & Solution

Date	29 June 2026
Team ID	-
Project Name	Credit Card Approval Prediction System
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/bhavanibandapu26/Credit-CardApprovalPrediction
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	Flask, Bootstrap, Scikit-learn
Key Features Implemented	• User-friendly web interface • Applicant data validation • Credit card approval prediction using Machine Learning • Real-time prediction results • Model prediction using Scikit-learn and Flask backend
Pending / Incomplete Features	None. All planned core features have been implemented and tested successfully.
Setup / Run Instructions	1. Access the deployed application using the Render URL. 2. Enter the applicant details in the prediction form. 3. Click "Predict" to receive the approval result. 4. For local development: • Clone the repository. • Install dependencies using <code>pip install -r requirements.txt</code>. • Run <code>python app.py</code> and access the application at <code>http://localhost:5000</code>.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a modular architecture with separate frontend, backend, and machine learning components. Proper coding standards, version control, and documentation have been maintained to ensure readability, maintainability, and future scalability.
